CAREER OBJECTIVE

To obtain a challenging position in Research analysis and where I can apply my strong analytics skills, problem solving abilities, and passion for innovation to drive impactful and transformative projects which strives for the better growth of the industries and also mine. I am dedicated to continuous learning and professional development, ensuring I remain at the forefront of emerging technologies and methodologies

EDUCATION

Bachelor's Degree in COMPUTER SCIENCE AND ENGINEERING 2025

AAA COLLEGE OF ENGINEERING&TECHNOLOGY

CGPA :7 upto 8 th semester

HSC STATE BOARD 2021

S.B.K HR.SEC.SCHOOL

PERCENTAGE:83%

SSLC STATE BOARD 2019

S.B.K HR.SEC.SCHOOL

PERCENTAGE: 74.8%

LANGUAGES KNOWN

English

Tamil

TECHNICAL SKILLS

- PYTHON
- CSS
- SQL
- AI FULLSTACK HANDLING
- HTML
- BOOTSTRAP
- DJANGO

PROJECT

AI BASED PETITION MONITORING SYSTEM

TEAM STRENGTH : 2

DESCRIPTION : Built an NLP(Natural Language Processing) system to monitor and analyze online petitions using sentiment analysis, keyword extraction, and detects fraud. Automated the petition to categorization, trend detection, prioritization, Fast Response, Highly Transparent and Optimized resource allocation, AI data-driven solution ALGORITHM USED : NLP, spaCy, SVM, BERT (NLP Model), VADER, LSTM, Anomaly detection, Random Forest Regression, XG Boost PUBLICATION : Our Project paper was Published in International Journal of Innovative Research in Technology Volume 11 and Issued on 12, May 2025

Car Rental Management System

TEAM STRENGTH: SOLO

A full-stack car rental platform built with React and Django. Users can browse available vehicles, make reservations, manage bookings, and process payments. Features an admin dashboard for fleet management, booking analytics, and customer management.

Car inventory management & real-time availability

Online booking & reservation system

User authentication & profile management

Admin analytics dashboard

Technologies Used:

React Django Django REST Framework MySQL Bootstrap JWT Auth Stripe Payments

MULTI-TENANT AI CONTENT & SOCIAL MEDIA SCHEDULER

TEAM STRENGTH : SOLO

DESCRIPTION: The Multi-Tenant AI Content & Social Media Scheduler is a full-stack SaaS platform designed to help small agencies and content creators generate, schedule, and automate social media posts across multiple platforms. Built with a React.js frontend and a Django REST Framework backend backed by a MySQL database, the platform features a multi-tenant architecture with JWT authentication, custom permission classes, and strict data isolation between client workspaces. It integrates the OpenAI API to generate tailored captions, hashtag recommendations, and marketing copy based on specified industry tones. To handle automated publishing without blocking the main application, the platform uses Celery and Redis to manage asynchronous background tasks, API rate-limiting, and scheduled dispatches. The frontend features a drag and-drop editorial calendar, real-time post previews for platforms like LinkedIn and X (Twitter), and an interactive analytics dashboard powered by Chart.js to track audience engagement, reach, and performance trends over time.

Technologies used: React.js, Django REST Framework, Python, MySQL, Razorpay / Stripe API, WeasyPrint
